Status Quo

Artificial Intelligence

- There always were Datacenters
- Many ambitious datacenter projects
- Focus on new facilities and expansions post AI era
- Push towards AGI
- Technology replacing humans in most fields
- note-to-self: why does the AI crisis seem to be different than technology not creating that many new jobs?

New Datacenters

The datacenters that are responsible for running and training the worlds most advanced LLMs.

Facilities

Datacenter	Location	Company	LLM
Canton Facility	Mississippi	Amazon	-
Monterey Park Data Center	California	California	-
Stargate Project	Saline Township, Michigan	OpenAI, Oracle	-
Colossus	Memphis	xAI	

Stargate

Specifications

Specs	Value
Investment	\$500 billion
Location	Abilene, Texas
Company	OpenAI & Oracle
IT Capacity	4.5 GW

Monterey Park Datacenter

Health Effects

In Canton, a majority Black town long marked by underinvestment, Amazon opened a \$10 billion AI data center that promised 1,000 jobs. Yet within months, residents began reporting lung irritation, breathing difficulties, and construction dust that settled over homes and playgrounds. Cooling towers pull millions of gallons of water daily from the already-stressed Big Black River system, while weekly tests of backup diesel generators spike local NOx levels and worsen the area's elevated childhood asthma rates.

Infrasound

Sustainable Pledges

Network

Network topology optimization

How are the cables routed

Finance

- Monopolizing goods for consumers leading to cost skyrocketing
 - Ram & Hard disk prices
- shift towards subscription based models and away from owning based logic

Sociopolitical ⚖️

Job Creation

However, some experts caution that long-term job numbers may be much lower. Large automated data centers often need only dozens of permanent staff once built. Bloomberg reported that Abilene's first facility may only employ ~57 ongoing workers, despite promises of thousands
